North Lincolnshire

Local Tobacco Control Profiles

Introduction

The aim of these profiles is to provide information for local government, health organisations, commissioners and other agencies to monitor the impact of tobacco on local communities, and to monitor the services and initiatives that have been put in place to tackle tobacco related problems.

The indicators contained within the web-tool were selected following consultation with stakeholders and a review of the availability of routine data. They are not exhaustive and should be used alongside local intelligence to gain a full picture of the range of tobacco control initiatives and issues in each locality.

The tobacco control profiles are part of a series of products produced by Public Health England that provide local data alongside national comparisons to support local health improvement.

This document is part of the Local Tobacco Control Tool. For further information about each indicator please view the definitions tab within the tool. For further information on tobacco and health please click here.
