North Lincolnshire

Local Alcohol Profile 2015

Introduction

Alcohol use has health and social consequences borne by individuals, their families, and the wider community. The aim of these profiles is to provide information for local government, health organisations, commissioners and other agencies to monitor the impact of alcohol on local communities, and to monitor the services and initiatives that have been put in place to prevent and reduce the harmful impact of alcohol.

Reducing harmful drinking is one of seven priority areas that Public Health England is focusing efforts on securing improvement. The indicators contained within the web-tool were selected following consultation with stakeholders and a review of the availability of routine data. The Local Alcohol Profiles for England (LAPE) are part of a series of products by Public Health England that provide local data alongside national comparisons to support local health improvement.

For further information about each indicator please view the definitions tab within the tool at http://fingertips.phe.org.uk/profile/local-alcohol-profiles. For further information on alcohol and health please visit http://www.lape.org.uk.
